Finance

Finance is alternatively defined as both the "art and science of managing money." Finance is the processes by which money is transferred among businesses, individuals, and governments. An understanding of finance not only prepares students for a variety of interesting and rewarding careers, but also equips them to make better decisions as investors throughout their lives. Virtually every business decision has financial implications and determining whether a particular decision will likely create value or destroy it is the underlying principle of the finance discipline.

A Bachelors of Business Administration with a concentration in Finance at Colorado Mesa University provides students with a foundation in the fundamental areas of business and combines this with advanced knowledge of finance, risk management, securities management, and investment theory.

Additionally, Colorado Mesa offers clubs and organizations, internships, and other professional development opportunities to enable students to develop the professional, academic and social skills that are essential to compete successfully in today's financial job market. Clubs such a Phi Beta Lambda aid students in acquiring skills that will set them apart from the average graduate. Members participate in a variety of activities that enable them to develop their own skill set and networks, while contributing to the improvement of the community in which they live, their school, and their chapter.

A person in this career field may:

- Review business and financial information to advise customers on possible trends in markets
