

# GARFIELD COUNTY ECONOMIC UPDATE

August 2024

The Garfield Economic Update is funded by the Associated Governments of Northwest Colorado.

## Economic Summary

- Rifle sales taxes increased by 9.3% from 2022 to 2023, Garfield County sales taxes increased by 10.2%, and Glenwood Springs increased by 4.6%.
- Retirement income as a percentage of total income is larger in Garfield County than in Colorado as a whole, accounting for 24.14% of personal income. This is larger than Colorado (12.03% of income), and similar to Mesa County (21.82% of income).
- A recent jobs report shows that job growth is decelerating. A recession indicator called the Sahm rule was triggered, which shows that a recession is likely starting when the three-month average unemployment rate rises by 0.50 percentage points or more compared to the lowest three month average of the previous 12 months. This has been a reliable indicator for recession historically. To combat a turning job market and a potential recession, the Fed is expected to lower rates in September.

SOURCES IN ORDER OF LISTING: Local Unemployment Rates: Bureau of Labor Statistics (LAUS); National Unemployment Rate: Bureau of Labor Statistics; Labor Force, Employed, and Unemployed: Colorado Department of Labor and Employment; Business Confidence: Leeds Business Confidence Index; Sales/Use/Lodging Taxes: City of Rifle, Garfield County, Glenwood Springs; Business Permits: Colorado Secretary of State's Office; Median Household Income, Poverty Rate, Population, and Personal Income: U.S. Bureau of the Census; Gross Regional Product: Bureau of Economic Analysis. Note that in all rows where percentages are presented the % change since last quarter and % change since last year represents the difference between the two percentages, not the actual percentage change.

## Local Labor Market

The Garfield County labor market has seen a slow but steady increase in employment for the last 3 years. After peaking at an annual employment average of 31,542 in 2019, Garfield County fell to 28,830 by 2021 but has now risen to 30,990 as of June 2024. Garfield County employment is rising but not at the same pace as neighboring Mesa County.

This employment data is from the state and has a fairly small sample size at the county level. Employment estimates are by place of residence, and individuals are counted as employed once even if they have multiple jobs.

The jobs data from the BEA is by place of work and paints a similar picture to the employment data (figure 2). Note the year lag on BEA data. The jobs data is more accurate than the employment estimates, and counts if a person works more than one job. Top jobs by industry include construction (5,993), government (5,400), and retail trade (3,812) (figure 3).

## Other Indicators

Rifle sales taxes increased by 9.3% from 2022 to 2023, rising from \$14,369,036 to \$15,704,160. Garfield County sales taxes increased by 10.2%, and Glenwood Springs increased by 4.6%. The Glenwood Springs accommodation tax increased by 5.6%.

The Leeds Business Confidence Index shows some improvements in business confidence in Colorado, but after the August jobs report it will be interesting to see if that confidence continues.

Table 1:

### 10, 5, and 1 Year Employment Comparison (Yearly Comparisons)

	Labor Force	Employed	Unemployed
<b>Annual</b>	929	782	147
<b>5-Year</b>	-256	-511	255
<b>10-Year</b>	983	1,681	-698
<b>Annual %</b>	3.0%	2.6%	16.7%
<b>5-Year %</b>	-0.8%	-1.6%	32.9%
<b>10-Year %</b>	3.2%	5.8%	-40.4%

Garfield County new business entity filings fell from 2022 to 2023, falling from 1,812 to 1,726. The 2024 number in figure 5 is through June.

Figure 6 illustrates what is called a "place of residence adjustment." This data is from the Bureau of Economic Analysis, and shows inflows and outflows of income to and from the county. A positive number indicates that more income is flowing into the county from other counties than flowing out. A negative number implies that more income is flowing out of the county to other counties than flowing in.

Garfield County has a history of negative place of residence adjustment. This implies that people from other counties commute to Garfield County and take their earnings back to their county of residence. Notice in figure 6 that Garfield County had a trend reversal and now has a positive place of residence, hinting that more people may now be commuting to work outside of Garfield and bringing that income into the county.

## Standard of Living Measures

Standard of living measures are the same from the last newsletter, and are only updated once per year by the BEA and Census Departments as they are yearly data. Garfield County GDP shows a large loss in output of 4.37% for 2022 (figure 8). The loss in GDP was led by large losses in oil and gas output.

Garfield County median household income rose slightly, rising from \$78,940 to \$86,566 (figure 9). Median household income has been rising quickly since 2012.

The Census Department's SAIPE (Small Area Income and Poverty Estimates) released their most recent poverty estimate, with Garfield County falling from 9.2% to 8%.

## Population Trends

The Colorado State Demography Office produces population estimates and population forecasts. Table 2 illustrates these forecasts for counties in the Western Slope. Garfield County is expected to gain population, rising from 61,791 in 2022 to 69,950 in 2030, to 82,780 in 2040, and to 92,516 in 2050. Population is a function of birth rate, death rate, and migration. Garfield County population growth is expected to be driven by its very high birth rate. In addition to a high birth rate, the expected migration rate is high. Population growth is a primary determinant of economic growth, and bodes well for Garfield County's future. Cost of living may be the issue that curbs Garfield's population growth in the future.

Table 2:  
**Population Estimates Table (2020-2050),  
 Colorado State Demography Office**

	Mesa	Montrose	Delta	Garfield	Rio Blanco	Moffat	Routt
<b>2020</b>	155,993	42,810	31,052	61,791	6,521	13,265	24,834

## Garfield County Employment Trends

Q4 2023 Quarterly Census of Employment and Wage data shows job and wage gains compared to Q4 2022. The biggest wage gains were in healthcare, construction, and mining. The biggest job gains were in healthcare (246), construction (210), and professional and accomodation and food services (255).

Figure 13 is not QCEW data, and instead shows the percentage of retiree income as a percentage of total income. Retirement income as a percentage of total income is larger in Garfield County than in Colorado as a whole, accounting for 24.14% of personal income. This is larger than Colorado (12.03% of income), and similar to Mesa County (21.82% of income).

Table 3:  
**Quarterly Census of Employment and Wages (QCEW) Q4 2023 Compared to Q4 2022**

### Local Real Estate Indicators

The Garfield County real estate market shows rising inventory, with inventory increasing year over year from 136 single family homes to 163. The median sales prices is currently at \$690,000, rising 3.1% from the year before. Days on market has increased from 47 to 71, indicating that homes are taking longer to sell. The Federal Housing Finance Agency house price index for Garfield County shows that homes increased in value by 12.25% from 2022 to 2023. The Census department shows that new private housing structures of all types have fallen from 240 to 155. Falling building permits and structures is a trend across the Western Slope.

The mortgage market continues to be challenging for both buyers and sellers. Buyers want homes but cannot afford them at these prices and interest rates. Meanwhile, those who want to sell feel locked into their lower interest rate mortgage and find a lack of inventory when looking to move. Rising interest rates, which are the result of the Federal Reserve's attempt to curve inflation, have dampened buyer demand.

The Federal Reserve is now expected to lower interest rates in September after a bad jobs report in early August which showed a slowing economy. As a result of the jobs report on August 2nd, treasuries rallied, pushing interest rates and mortgage rates down. As of the writing of this newsletter, mortgage rates fell far below 7% and are likely moving towards 6%. The average mortgage rate was 6.85% in July.

**Oil and Natural Gas Prices**

Figure 16:  
Oil/Gas Drilling Permits and Oil/Gas Jobs

Figure 17:  
Mesa and Garfield Oil and Gas Jobs/Wages

**Western Slope Energy**

WTI oil prices averaged \$81.81 in Q2 2024, and as of early August are in the mid-\$70 range. The Energy Information Agency expects Brent Crude oil price to stay near \$90 per barrel in the second half of 2024 due to geopolitical risks and OPEC+ production cuts. Record amounts of natural gas production have caused natural gas prices to fall, falling to \$2.08 in Q2. The EIA expects natural gas prices to increase to \$2.90 in the second half of 2024. Low prices have forced production cuts, which over several months should increase the price of natural gas.

## NATIONAL ECONOMIC INDICATORS

	Q2 2024	Q1 2024	Q2 2023	% change since last period	% change since last year (comparable quarters)
<b>Business Cycle Indicators</b>

Figure 20:  
Real GDP for U.S.

Figure 21:  
Non-Farm Payrolls (Quarterly)

## Economic Growth

U.S. GDP growth for Q1 2024 was 1.6%, revised recently to 1.4%. Q2 GDP growth came in at 2.8% (figure 20). Many new data points, both GDP and jobs, have had downward revisions as of late. However, the Atlanta Federal Reserve's GDPNow estimates 2.5% (as of August 3rd) growth for Q3, which is a reasonable growth rate. The GDP number is important because the jobs report on August 2nd was significantly lower than forecast, leading many economists to predict a recession.

The unemployment rate has crept up to 4.3% in July. The jobs report showed 114,000 jobs created nationally in July, but it is important to note that is a preliminary estimate. There are revisions a few months later. Figure 21 shows that job growth is decelerating, but note the graph uses quarterly data. July's 114,000 jobs is significantly less than June's 179,000.

## Inflation and Recession Watch

May inflation came in at 3%, with most inflationary indicators showing that the inflation has likely been tamed. There have been two components to inflation, the supply side and the demand side. On the supply side, the employment cost index

(figure 25) shows that the labor market wages have fallen. The U.S. has added a significant number of people to the labor force through immigration, which in certain sectors pushes wages down. On the demand side, the COVID era fiscal policy in the form of "checks" that household received have finally been spent. Figure 26 shows that personal savings rates are very low and that people have spent their COVID level savings. The consumer has been pummeled by inflation the last two years and is finally changing spending habits. This can be seen in company earnings calls that are consumer-related. Job growth is slowing and employees can no longer feel confident about finding a different job that pays more, which has been the trend the last three years. These two factors have led to the likely defeat of inflation.

On Friday, August 2nd, the Sahm rule was triggered, which shows that a recession is likely starting when the three-month average unemployment rate rises by 0.50 percentage points or more compared to the lowest three month average of the previous 12 months. This has been a reliable indicator for recession, and can be seen graphically after an unemployment trough forms. To combat potential recession, the Fed is now expected to lower rates in September, possibly by 50 basis points to spur investment and lower consumer borrowing rates.
