Athletic Training

Athletic trainers work closely with other members of a healthcare team including physicians, physician's assistants and others to care and prevent illness and injury related to sports and exercise. Athletic trainers advise, diagnose, evaluate, treat, and rehabilitate athletes in order help them participate in athletic competition. Certified athletic trainers gain employment in a variety of settings including but not limited to: high school/college athletic programs, professional sport programs, outpatient physical therapy/sports medicine clinics, industrial/corporate settings, and even the US military.

The Athletic Training Education Program (ATEP) at Colorado Mesa University is fully accredited by the Commission on Accreditation of Athletic Training Education (CAATE). Students must complete 15 to 20 hours per week of field/clinical experiences working with Colorado Mesa University athletic teams and at nearby off-campus affiliate sites. The off-campus affiliate sites include high school athletic training settings, outpatient physical therapy clinics, and several physician offices including general medicine and orthopedics. The program is designed to not only prepare students for a career in athletic training but also to form a foundation for graduate school and the pursuit of advanced degrees in healthcare. Field experience will include rehabilitation hours, team preparation, sports coverage, and game coverage. Students must apply to get into the ATEP. The criteria for determining admission will include the following: demonstrated work ethic, involvement during observations, overall GPA, pre-requisite course GPA, interview, and the recommendation from a supervising certified athletic trainer for transfer students.

A person in this career field may:

- Be available for treatment/care of athletes at sporting events
- Evaluate athletic injuries and assess athletes’ ability to participate in competition
- Work with medical professionals to develop rehabilitation plans for injured athletes
